

FILTER BRITA PURITY C1100 QUELL ST

Great for coffee and Espresso Vending machines, hot and cold drinks and medium-sized convection Aries. The Filter from

the water removes water stone, chlorine, heavy metals and small particles and water. Because of the unique By Pass Water

allows you to prepare a constant quality of drinking water, regardless of the region and its quality.

At 10 KH and ByPass It 40%, it filters 11500 L, which is why it is recommended for very large consumers (e.g. from 2 kg < of Coffee consumption per day).

Trusted BRITA Systematic Filter Technology decarbonises water in four steps:

1 Pre-filtration

A pre-filter retains coarse particles.

2 Carbonate hardness reduction

Filter medium reduces carbonate hardness to reduce limescale formation.

3 Activated carbon filtration

All water – including bypass water – runs through an activated carbon filter to reduce taste and aroma impairing substances.

4 Fine filtration

Finally, a fleece retains remaining fine particles.

IntelliBypass technology

The unique IntelliBypass technology allows for a constant by-pass water rate irrespective of the volumetric flow. This

ensures

consistently high water quality, particularly in case of low water throughput rates.
