

PURITY C50 FRESH

A Special filter used for cold drinks on areas where the water is very soft. The water filter removes chlorine, heavy metals and small particles in water. More freshness in the cup for hot drinks from coffee machines and vending machines.

The PURITY Fresh C50 was specially developed for soft water areas.

Size: C50 Activated carbon filtration with a capacity of 12,000 litres

Trusted BRITA Systematic Filter Technology optimises soft water in three steps:

1 Pre-filtration

A pre-filter retains coarse particles.

2 Activated carbon filtration

All water – including bypass water – runs through an activated carbon filter to reduce taste and aroma impairing substances.

3 Fine filtration

Finally, a fleece retains remaining fine particles.

IntelliBypass technology

The unique IntelliBypass technology allows for a constant by-pass water rate irrespective of the volumetric flow. This ensures

consistently high water quality, particularly in case of low water throughput rates.

It doesn't remove a water stone from the water!
